One-Stop Testing Centre

Over 35 Years of Experience

- National Environment Agency approved centre for stack emission testing
- National Environment Agency approved lab for Legionella testing
- SWS & BCA approved test centre for welders
- Singapore Workforce Development Agency approved training organisation
- FAA approved repair station for NDT
- CAAS approved organisation for Special Process (NDT)
- Ministry of Manpower approved noise monitoring consultant
- Ministry of Manpower approved inspection agency for pressure systems (piping) and lifting equipment
- Ministry of Manpower approved test centre for lower levy conversion for welding trade test
- Ministry of Manpower approved inspection agency for extension of service life of a mobile crane
- Ministry of Manpower approved auditor for scheme for extension of statutory inspection of pressure vessels

BUILDING & CONSTRUCTION MATERIAL TESTING

- Concrete / Cement / Concrete Admixtures / Wood & Timber
- Decorative finishes / Ceramic tiles
- Aggregates / Stones / Rocks
- Skim coatings / Plasters
- Epoxy / Flooring materials
- Tile adhesive / Sealant
- Paint / Coating
- Repair materials
- Plastics / Rubber
- Waterproofing system
- Glass solar property / Partition wall system
- Playground, sports floor testing
- Microscopic analysis

STRUCTURAL INTEGRITY & TESTING

- Basic NDT
 - Rebound hammer, covermeter, half cell potential, concrete resistivity, ultrasonic pulse velocity and windsor probe
- Advance NDT
 - Impulse response, impact echo, surface penetrating radar, infrared thermography and fibroscope inspection
- Field inspection & testing on glass
- Structural investigation & appraisal
- Water tightness test on window & facades
- Pull-out test on structural and architectural fixings

GEOTECHNICAL & PAVEMENT TESTING

- Laboratory soil testing
- In-situ pavement conditioning assessment
- Runway and pavement assessment
- Soil investigation & geotechnical instrumentation
- Ground penetration radar survey
- Borehole radar survey
- Electric resistivity by Werner probe method

CHEMICAL & MICROBIOLOGICAL TESTING

- Building materials and chemical analysis
- Building material testing (microbiological)
- Food and water microbiological analysis
- Food nutrients and chemical residues analysis
- Toxin Testing
- Pharmaceutical / medical product analysis
- Antibacterial efficacy studies

FOOD HYGIENE CONSULTANCY

- Kitchen audits
- FPA-SAFE food safety audit by certified auditors

CALIBRATION & MEASUREMENT

- Pressure, mass, force, temperature, dimensional, torque, optical and electrical

ELECTRICAL & ELECTRONICS TESTING

- Appliances to Spring Consumer Product Safety Requirement
- PUB water efficiency testing for washing machine (WELS)
- NEA Energy label testing for dryer
- IP (Ingress Protection against water) testing
- General product testing e.g. EBPOS (SS209)
- Product listing and batch testing

PRODUCT CERTIFICATION

- Ready-mixed concrete
- Fire safety products
- Electrical and electronics product
- Non-regulated products

MICRO-CONTAMINATION TESTING

- Ultrapure water and chemical testing
- Airborne Molecular Contaminants (AMC) & Surface Molecular Contaminants (SMC) analysis
- RoHS and REACH compliance tests
- Failure analysis (surface analysis)
- Micro-contamination analysis for microelectronic devices
- Cleanroom consumables and packaging materials testing
- ElectroStatic Discharge (ESD) testing
- Green label and green mark testing
- Toys safety testing

ENVIRONMENTAL MONITORING & CONSULTANCY

- Stack emission
- Indoor air, ambient air, odour and cleanroom air monitoring
- Industrial hygiene monitoring
- Trade effluent
- Water testing for domestic and industrial purposes
- Drinking water for WHO guideline, Swimming pool water
- RO water, DI water, Groundwater and Seawater
- Environmental Baseline Study
- TCLP for landfill purposes, soil, sediment & sludge
- Soil for engineering and construction purposes
- Asbestos analysis (bulk materials & air-borne)

MECHANICAL & MAINTENANCE TESTING

- Mechanical Testing
 - Tensile, bend, impact, hardness, fatigue, hydrostatic
 - Proof load test, stress & strain analysis- Test bench design
- Plant / Equipment Monitoring
 - Infrared Thermography
 - Acoustics & vibration analysis

METALLURGY

- Failure analysis
- In-situ metallography
- Corrosion monitoring and analysis
- Material evaluation / SEM-EDX
- Heat treatment
- Debris analysis

NON-DESTRUCTIVE TESTING

- Multi Sector: RT, UT, PT, VT, MT and ET
- Aircraft Inspection: RT, UT, MT, PT, ET & Boroscopic inspection
- Advance NDT: IRIS, MFLT, PAUT, TOFD, DR, PMI XRF/ARC Corrosion Mapping

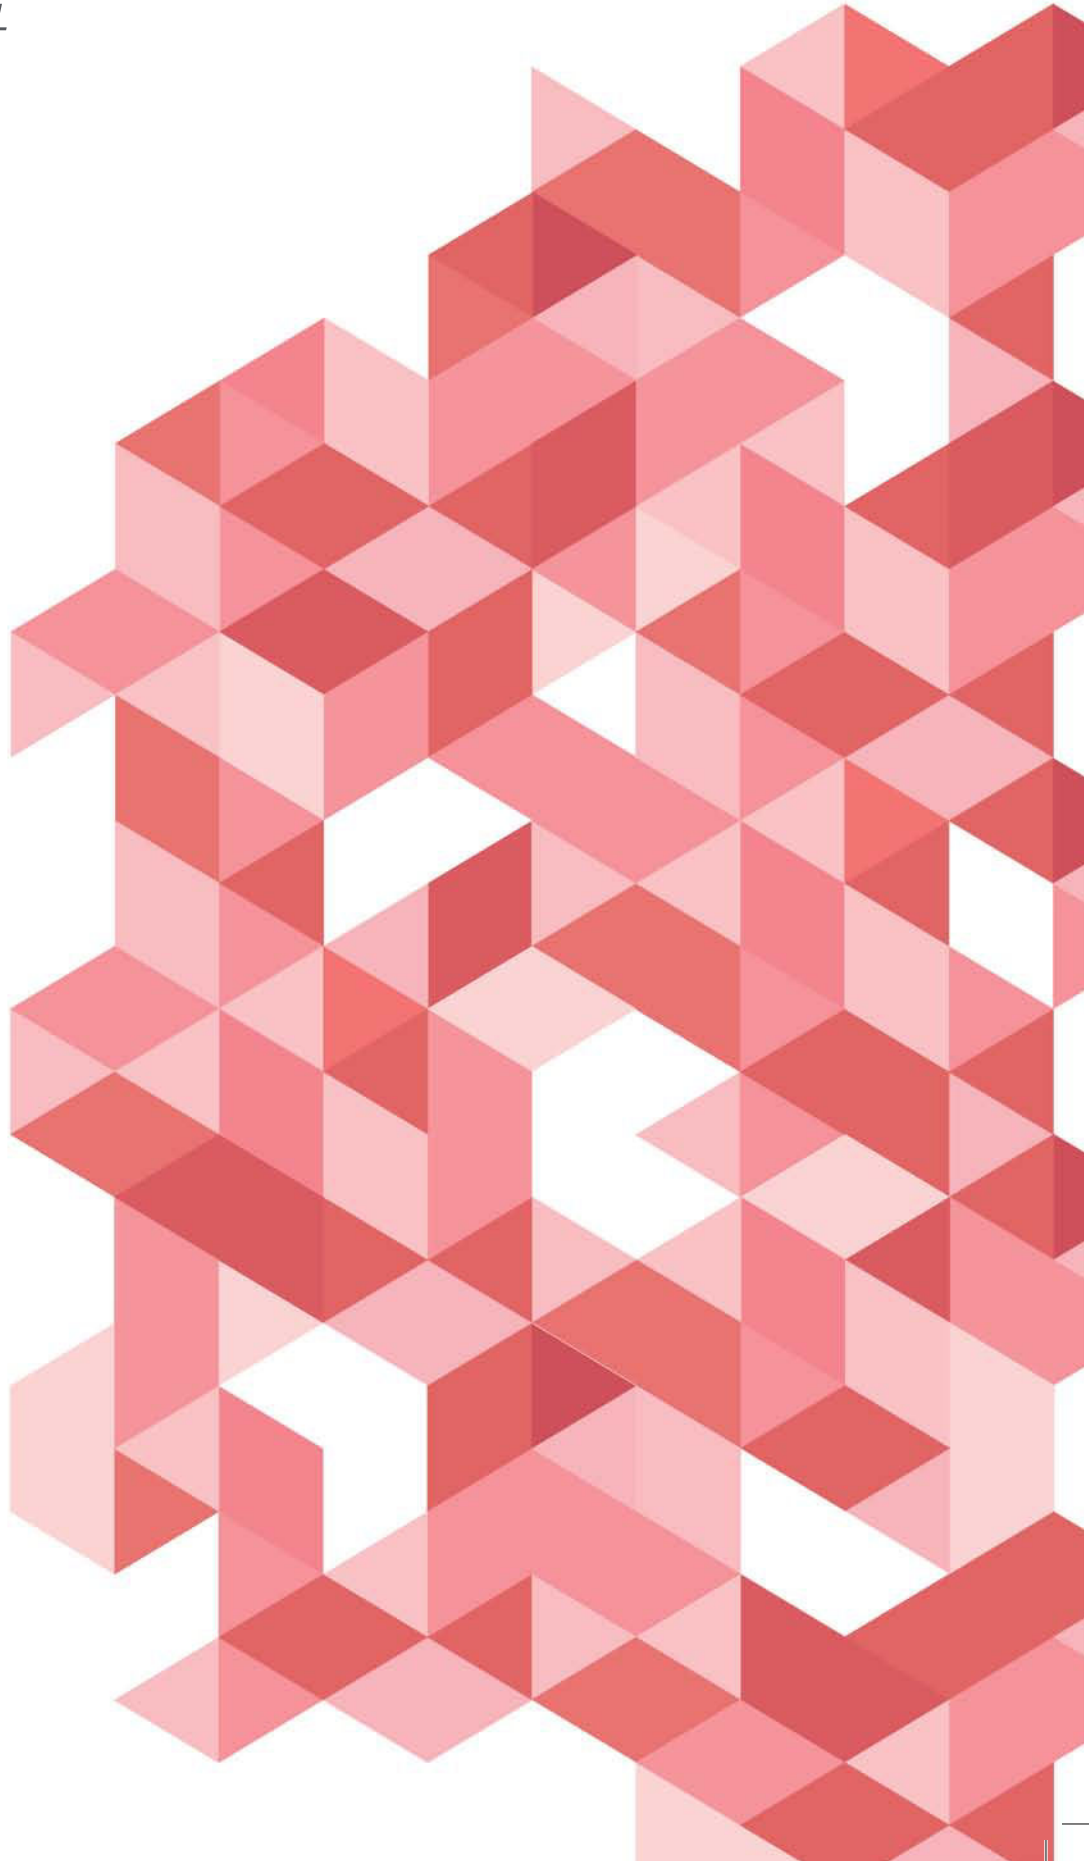

INSPECTION SERVICES

- API 570/510/653 Inspection
- Third-party inspection & vendor's audit
- Audit of oil, gas, petrochemical & power plant
- Welding inspection
- QA/QC Personnel support
- Welder & welding procedure qualification test
- Tank Inspection: MFE, UTG Crawler, Survey, Certification
- Central Alarm Monitoring Stations (CAMS)

QUALITY ASSURANCE, TRAINING & CONSULTANCY

- Welding consultancy
- Project & equipment inspection / expediting
- Product batch testing / inspection
- Risk based inspection (RBI) / plant life assessment
- Material consultancy, building audit, forensic engineering, risk assessment and architectural engineering
- QMS consultancy
- Seminar, technical and certification courses, workshops

PERFORMANCE

Improve plant performance
and achieve your business goals

RELIABILITY

Optimize and preserve asset
reliability and maximize your
return on investment

MAINTENANCE

Keep your operations
running safely, consistently,
and economically

Manage the Risk of Uncertainty in Your Flow Measurement System

Calibration & Validation Services

Reduce measurement uncertainty and sustain repeatability with regular maintenance and calibration

Flow Meter Calibration

- NIST traceable ISO/IEC17025 accredited flow calibrations
- As found/As left
- Mass/Volume/Density
- Designated by Spring Singapore as an Authorized Verifier (AV) to perform verification and sealing of flow meters for trade use.
- Factory certified product analysis

Compact Prover Inspection and Refurbishment

- Mechanical Refurbishment includes seal, hydraulic hose and linear bearings replacement, optical assembly upgrade, seal leak check, hydrotest, water draw calibration and certification, functional test and repaint
- Optical Assembly Upgrade
- Prover Flow Computer Upgrade
- Automatic Plenum Adjustment Panel Upgrade

Audit & Consulting Services

Increase confidence and mitigate risks by detecting potential and hidden issues in your flow measurement system

- ISO 17020 accredited audit services
- Uncertainty analysis of measurement systems
- Review measurement systems, operations & production reporting
- Advise areas contributing to uncertainty & provide improvement recommendations
Eg. technology selection, sizing
- Fiscal measurement training programs

SAMWOH

Innovate

Sustainable

Connecting Singapore since 1975

At Samwoh Corporation, we realise how valuable connectivity is for Singapore and Singaporeans. That is why over the past four decades we have strived to find more diverse ways to build even better connections across the country.

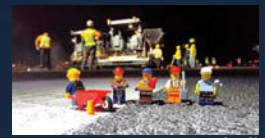

Today, we are a vertically integrated infrastructure company building roads, highways, underpasses, flyovers and airport to asphalt, ready-mixed and precast concrete products. We are friendly to the environment, with the capability to recycle what we have built.

Supported by our extensive award-winning research, Samwoh continues to innovate new & sustainable products and technologies.

Samwoh is proud to be a market leading construction firm, providing one-stop solutions for building a better, more connected, Singapore.

**MATERIALS & STRUCTURAL
LABORATORY SERVICES**

This laboratory is accredited by the National Association of Testing Authorities, Australia & Singapore Laboratory Accreditation Scheme for Specific Tests

DNV GL laboratory offers standard testing and customized solutions with integrated competences, ranging from materials testing and component/technology qualification to structure integrity assessment. A new 5500 m2 laboratory and state-of-the-art testing facility was opened in 2014, consolidating our position as the largest independent laboratory in SEA and the leading laboratory service provider in Asia Pacific for the oil and gas industry. Broad range of laboratory based services includes:

Field Services

- Material and structure condition assessment
- In-situ metallographic examination
- NDE and materials flaw sizing
- Weighing of structure and module
- Calibration of test bed
- Noise and Vibration Measurement
- In-situ strain gauging and stress measurement
- Pipe mill and manufacturer audit

Laboratory Services

- Welding procedure qualification tests
- Fatigue and fracture mechanics tests
- Metallurgical Evaluation and failure analysis
- Corrosion testing and inhibitor qualification
- Sour service testing
- Protective coating testing and qualification
- Component qualification and design validation
- High temperature and high pressure materials testing

Laboratory Services

- Large and full scale testing
- Calibration of load and pressure equipment

Consultation and Assessment

- Materials selection and specification review
- Welding Technology and Non-Destructive Testing (NDT)
- Failure investigation
- Engineering Criticality Assessment (ECA)
- Fitness for Service (FFS) Assessment

Message From

MR RENNY YEO

Chairman, Singapore Accreditation Council

Accreditation and conformance provide the quality assurance essential for infrastructure to drive growth and competitiveness of our industries as well as help to build trust in our products and services. They will continue to play a key role in our future economy, supporting emerging areas and industry transformation.

30 years of Accreditation

Last year the Singapore Accreditation Council (SAC) celebrated the 30th anniversary of Singapore's accreditation programme. The accreditation infrastructure in Singapore has developed in tandem with the growth of our nation and industries. Starting with an accreditation scheme solely for laboratories in 1986 to support our domestic needs, SAC has grown to an internationally recognised accreditation body with over 36 accreditation programmes and more than 570 accreditations to support the growth of key industry sectors such as the chemical, biomedical, construction, manufacturing, marine and offshore, healthcare, logistics and food.

Accreditation has also helped regulators in their work as accredited conformity assessment bodies (CABs) provide the trust and confidence for regulators to make informed decisions on vital issues such as environmental protection, public safety, fraud prevention, fair and efficient markets and public trust. Some of the programmes that are used by regulators include the Good Distribution Practice for Medical Devices (GDPMDS) Certification and Occupational Safety and Health Management System (OSHMS) Certification.

International positioning

A major focus of Singapore's economic strategy has been strengthening ties with key trading partners to create opportunities for our companies. Accreditation plays an important role in this. It provides the assurance that CABs are competent and meet international standards. This means that the companies that are certified by these CABs provide products and services that conform to specified requirements, so that end-users can have the confidence in the results for their decision-making.

SAC's Mutual Recognition Arrangements (MRAs) are one avenue of economic cooperation. MRAs promote cross-border trade with the recognition of SAC-accredited certificates and reports in different markets. This lowers technical barriers for conformance, thereby serving as a global passport for enterprises in Singapore, enabling our products and services to be "checked once, accepted everywhere", which also reduces cost of doing business.

SAC is active in regional and international forums, having signed 13 MRAs for testing, calibration, medical, inspection,

proficiency testing providers, product certification, quality management system certification and food safety management system certification. Through these arrangements, SAC accreditation helps to facilitate market access to more than 80 economies, covering more than 85 percent of Singapore's exports. The SAC mark helps in branding the services and products provided by our businesses. We plan to expand the coverage of our MRAs to new accreditation programmes such as environmental management system, energy management system and personnel certifications.

SAC continues to widen its international networks to enhance the international recognition of SAC-accredited organisations. Ms Chang Kwei Fern, Director of Accreditation Division, SPRING Singapore has been appointed as Chairman of the Pacific Accreditation Co-operation (PAC) for the period 2016-2019. Congratulations! This will enhance SAC's leadership position in the international and regional fora.

Accreditation Community

Over the past 30 years, SAC has collaborated with over 500 assessors and partners. The success of SAC will not be possible without the drive, commitment and contributions of these volunteers. On behalf of the SAC, I would like to thank our accreditation partners who have contributed tremendously to the national accreditation programme.

SAC will continue to organise various platforms, such as the SAC Customer Day, Assessor Enclave and dialogue sessions this year, to engage with the accreditation community and allow for our customers, assessors and partners to network and share ideas to co-create solutions and raise the value of accreditation.

The Future

In view of the Industry Transformation Programme outlined in Budget 2016, where more than 20 Industry Transformation Maps (ITMs) will be developed to help drive productivity and innovation, invest in skills and promote internationalisation, SAC will constantly review our programmes to stay relevant and develop new programme to support the ITM initiatives.

SAC will play an integral role in supporting the transformation of our industries and enterprises as Singapore charts its strategies for the future economy. Trust will remain an important competitive advantage as increasingly sophisticated customers demand for products and services from companies whom they have confidence in.

I look forward to working with all stakeholders and partners, to continue to expand our footprints to support national initiatives and to achieve the goal of "checked once, accepted everywhere".

SINGAPORE ACCREDITATION COUNCIL

The Singapore Accreditation Council (SAC) was formed in 1996 to carry out independent accreditation of conformity assessment bodies in Singapore. It is the national authority for the accreditation of conformity assessment body which operates under the purview of SPRING Singapore to build trust in Singapore products and services. It aims to strengthen Singapore's technical infrastructure for conformity assessments as well as in forging mutual recognition agreements (MRAs) with our economic partners.

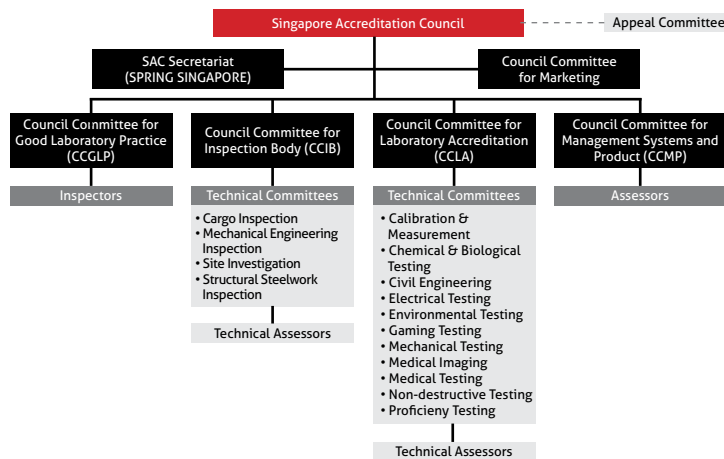

The SAC operates in accordance with the relevant international standards and requirements, maintains integrity and impartiality and takes into account national and public interest. The SAC is the designated Singapore representative in regional and international fora on accreditation and related conformity assessment activities. It works closely with government agencies on MRAs with regional and international bodies to facilitate trade for Singapore.

SAC ACCREDITATION SCHEMES

The SAC operates the following accreditation schemes:

- Accreditation Scheme for Certification Bodies
 - Quality Management System
 - Environmental Management System
 - Occupational Safety and Health Management System
 - HACCP based Food Management System
 - Food Safety Management System
 - Good Distribution Practice for Medical Devices
 - Business Continuity Management
 - Energy Management System
 - Water Efficiency Management System
 - Learning Service Providers
 - Multi-Tiered Cloud Computing Security
 - Management of End-of-Life ICT Equipment

About SPRING Singapore

SPRING Singapore is an agency under the Ministry of Trade and Industry responsible for helping Singapore enterprises grow and building trust in Singapore products and services. As the national standards and accreditation body, SPRING develops and promotes an internationally-recognised standards and quality assurance infrastructure. SPRING also oversees the safety of general consumer goods in Singapore. As the enterprise development agency, SPRING works with partners to help enterprises in financing, capability and management development, technology and innovation, and access to markets. Please visit www.spring.gov.sg for more information about SPRING Singapore.

NEED TESTING, MEASUREMENT, INSPECTION OR CERTIFICATION SERVICES? LOOK OUT FOR THE SAC ACCREDITATION MARK

The Singapore Accreditation Council (SAC) is the national accreditation authority in Singapore. It is managed under the aegis of SPRING Singapore, a statutory board under the Ministry of Trade and Industry.

Reports and certificates bearing SAC marks are widely recognised by regulators and the industry. SAC is a signatory to various regional and international mutual recognition arrangements (MRAs). This means that reports and certificates bearing SAC marks are accepted by many of Singapore's trading partners globally and in the Asia Pacific region.

You can have greater confidence when you use the services of companies that have been accredited by the SAC. These companies have met internationally recognised standards for their competence and produce reliable test data, reports and certificates. They are also periodically assessed by SAC to ensure that they continue to comply with standards.

A company which has been certified by an accredited certification body will be issued a certificate which will bear both the SAC and the respective certification body's marks. This shows that the company has implemented a system that meets international/national standards to provide reliable products and services.

Not all laboratories, inspection bodies, certification bodies and proficiency testing providers (PTP) are SAC accredited, and accreditation may only be for specific services rendered by these companies. So always look out for the SAC mark on accredited reports and certificates.

The accreditation status of companies and their scopes of accreditation are available on SAC's website at:

www.sac-accreditation.gov.sg

Congratulations for choosing an SAC accredited company! You have the assurance of reliable and well accepted testing, measurement, inspection and certification services.

ENSURING RELIABLE AND IMPARTIAL CERTIFICATION SERVICES FOR SINGAPORE

The Accreditation Scheme for Quality Management System Certification Bodies was launched in October 1996 to maintain the standard of certification activities in Singapore.

Since then, the SAC has expanded its accreditation scheme for certification bodies to the following:

- Environmental Management System Certification (November 1999)
- Product Certification (November 2001)
- Occupational Safety and Health Management System (OSHMS) Certification (July 2005)
- Hazard Analysis Critical Control Point (HACCP) based Food Management System Certification (September 2005)
- Food Safety Management System Certification (October 2006)
- Certification of Good Distribution Practice for Medical Devices (April 2008)
- Certification of Ready-mixed Concrete (April 2009)
- Business Continuity Management Certification (April 2010)
- Energy Management System Certification (July 2012)
- Water Efficiency Management System (May 2013)
- Personnel Certification (August 2013)
- Certification of Learning Service Providers (August 2014)
- Multi-Tiered Cloud Computing Security (MTCS) Certification (October 2014)
- End-of-Life ICT Equipment Management System (EIMS) Certification (November 2014)
- Asset Management Certification (August 2015)

WHY BE ACCREDITED?

1. Increase Confidence

SAC accreditation is an endorsement of the certification body's competence, credibility, independence and integrity in carrying out its services. SAC accredited certificates are widely recognised by regulators and industry. Users, therefore, can have greater confidence when they engage the services of SAC accredited certification bodies.

These certification bodies have been thoroughly assessed by SAC to meet internationally recognised standards for their competence. They are also periodically monitored to ensure that they continue to comply with standards.

2. International Recognition

As a member of the Multilateral Recognition Arrangement (MLA) for Quality Management System, Food Safety Management System and Product Certification of both the Pacific Accreditation Cooperation (PAC) and the International Accreditation Forum (IAF), certificates issued by SAC accredited certification bodies are recognised worldwide by MLA members.

ACCREDITATION CRITERIA

Depending on the certification scheme to be accredited, certification bodies must meet specific international/national standards and SAC requirements, as appropriate. These are:

- ISO/IEC 17021-1, Conformity Assessment – Requirements for Bodies Providing Audit and Certification of Management Systems
- ISO/IEC 17021-2, Part 2 – Competence Requirements for Auditing and Certification of Environmental Management Systems
- ISO/IEC 17021-3, Part 3 – Competence Requirements for Auditing and Certification of Quality Management Systems
- ISO/IEC 17021-5, Part 5 – Competence Requirements for Auditing and Certification of Asset Management Systems
- ISO/IEC 17021-6, Part 6 – Competence Requirements for Auditing and Certification of Business Continuity Management Systems
- ISO/TS 22003, Food Safety Management Systems – Requirements for Bodies Providing Audit and Certification of Food Safety Management systems
- ISO/IEC 17024, Conformity Assessment – Requirements for Bodies Operating Certification of Persons
- ISO/IEC 17065, Conformity assessment – Requirements for Bodies Certifying Products, Processes and Services
- SAC HACCP Document No 1 – Requirements for HACCP Auditing Methodology and Criteria for Auditors
- SAC CT02 – SAC Criteria for Certification Bodies (OSHMS)
- SAC CT04 – SAC Criteria for Certification Bodies (Good Distribution Practice for Medical Devices)
- SAC CT05 – SAC Criteria for Certification Bodies (Ready-Mixed Concrete)
- SAC CT08 – SAC Criteria for Certification Bodies (Business Continuity Management)
- SAC CT09 – SAC Criteria for Certification Bodies (Quality Management for Bunker Supply Chain)
- SAC CT10 – SAC Criteria for Certification Bodies (Energy Management)
- SAC CT11 – SAC Criteria for Certification Bodies (Water Efficiency Management System)
- SAC CT13 – SAC Criteria for Certification Bodies (Learning Service Providers)
- SAC CT14 – SAC Criteria for Certification Bodies (Multi-Tiered Cloud Computing Security)
- SAC CT15 – SAC Criteria for Certification Bodies (Management of End-of-Life ICT Equipment)
- SAC CT16 – SAC Criteria for Certification Bodies (Asset Management)

The certification bodies will be assessed based on their independence, integrity and technical competence. Management system certification bodies must demonstrate their ability to audit organisations' management systems against the requirements of the international/national standards, i.e. ISO 9001, ISO 14001, ISO 22000, SS 506: Part 1 and/or Part 3, HSA TS-01, ISO 22301, ISO 50001, ISO 29990, ISO 55001, SS 524, SS 577, SS 590 etc. Product certification bodies must also have the capability to assess product compliance to national or international standards.

Application for accreditation is open to all certification bodies.

SINGAPORE LABORATORY ACCREDITATION SCHEME (SAC-SINGLAS)

Greater Assurance, Less Risk, More Business

WHAT IS LABORATORY ACCREDITATION?

Laboratory Accreditation is a formal recognition of the technical competence and the effective management process of a laboratory and its staff.

Accreditation is applicable to all types of laboratories conducting tests, calibrations and measurements in a wide spectrum of fields. The areas of accreditation currently offered by SAC include calibration & measurement, chemical & biological, civil engineering, electrical, environmental, functional food, gaming, mechanical, medical, medical imaging and non-destructive testing.

WHY YOU SHOULD USE A SAC-ACCREDITED LABORATORY?

1. Gain Assurance Of Competence

Using an accredited laboratory for your testing and calibration services allow you to have a peace of mind that the competence of the laboratory engaged for testing of your products, has been assessed in accordance with international standards. The accredited laboratory having met the relevant standards is subjected to regular surveillance visits to ensure compliance.

2. Minimise Your Risk

A SAC-accredited laboratory is assessed to have the technical competency in performance of the testing and calibration services. The staff are trained and experienced and the laboratory operates an effective management system. Hence, you can be assured that your product is competently tested and you can avoid the risk of re-testing or re-work of your products.

3. Gain Customers Buy-In And New Business

Increasingly, accreditation has been recognized and accepted by users and specifiers. The use of an accredited laboratory during the testing of your product will help you improve your company's image and increase customer buy-in.

4. Enable overseas acceptance

As SAC is a signatory member of the Asia Pacific Laboratory Accreditation Cooperation (APLAC) and the International Laboratory Accreditation Cooperation (ILAC) Mutual Recognition Arrangement (MRA) for testing and calibration, reports issued by SAC accredited laboratories are recognised by more than 80 countries worldwide. Therefore, you can avoid costly re-testing of your products for overseas market access.

ACCREDITATION CRITERIA

Laboratories are accredited based on an international standard, ISO/IEC 17025 – General Requirements for the Competence of Testing and Calibration Laboratories or ISO 15189 – Particular Requirements for Quality and Competence (for medical testing laboratories and medical imaging facilities).

Besides these international standards, there are also additional accreditation criteria and specific technical notes which the laboratory needs to comply with, depending on the area of testing and calibration.

Accreditation is given for specific tests and calibrations in specific fields. It is not a blanket endorsement of all laboratory testing activities undertaken by the accredited laboratories. Laboratories are only allowed to issue accredited reports for those tests and calibrations that are accredited.

For more details, visit SAC website at www.sac-accreditation.gov.sg

ACCREDITATION SCHEME FOR INSPECTION BODIES

Greater Assurance, Less Risk, More Business

WHAT IS INSPECTION ACCREDITATION?

Inspection accreditation is a formal recognition of the competence of inspection body performing specific inspection activities based on international standards.

Accreditation is applicable to all types of inspection bodies, ranging from in-house inspection services in manufacturing companies to independent third-party inspection bodies. The areas of inspection currently offered by SAC include pressure vessels and lifting equipment, hook-lift and container inspection, motor vehicles, structural steel work, cargo inspection, central alarm monitoring stations and site investigation works.

WHY YOU SHOULD USE AN SAC-ACCREDITED INSPECTION BODY?

1. Gain New Business

Increasingly, specifiers and users are stipulating the use of accredited services, which is most notably in the public sector. Hence, engaging a SAC-accredited inspection body will help you to gain acceptance of your products and services, resulting in greater competitiveness in the marketplace.

2. Reduce Costs

While the cost of engaging a SAC-accredited inspection body might be higher, it is eventually more cost-effective as properly-inspected products and services are more reliable, leading to reduced downtime and avoiding unnecessary cost for re-work or re-inspection.

3. Minimise Risk

A SAC-accredited inspection body has been assessed to possess the technical competency in performing the accredited inspection activities. Thus, you can be assured that your products that have been carefully inspected by a pool of reliable and technically competent inspectors. Moreover, having competent body to carry out inspections will help to mitigate claims and unnecessary recall of your products.

4. Increase confidence

SAC-accredited inspection body will mean that the integrity of the management system, technical competency of the inspectors including the decision making of the inspection results had been carried out professionally without conflict of interest.

5. Enable overseas acceptance

As SAC is a signatory member of the Asia Pacific Laboratory Accreditation Cooperation (APLAC) and the International Laboratory Accreditation Cooperation (ILAC) Mutual Recognition Arrangement (MRA) for Inspection Body, reports issued by SAC accredited inspection bodies are recognized worldwide in more than 70 countries.

ACCREDITATION CRITERIA

Inspection bodies are accredited based on the international standard, ISO/IEC 17020: 2012 General Requirement for the Operation of Various Types of Bodies Performing Inspection. An accredited inspection body is deemed to have met the required standards of quality, performance, technical competence and professional judgment.

Besides this international standard, there are also specific technical notes which the inspection body needs to comply with, depending on the area of inspection.

The accreditation of an inspection body is only granted for a specific scope of inspection activities. It is not a blanket accreditation of all inspection activities undertaken by the inspection body.

SINGAPORE GLP COMPLIANCE PROGRAMME

Quality Assurance for Non-clinical R&D

The Singapore Good Laboratory Practice (GLP) Compliance Programme was launched in November 2007 to recognise facilities which provide non-clinical safety testing in accordance with the Organisation for Economic Co-operation and Development (OECD) Principles of Good Laboratory Practice.

As the GLP Monitoring Authority, SPRING Singapore developed this programme with key stakeholders including the Agri-Food & Veterinary Authority (AVA), Economic Development Board (EDB), Health Sciences Authority (HSA) and National Environment Agency (NEA).

The GLP programme ensures that a facility's processes and the conditions in which laboratory studies are planned, performed, monitored, recorded, reported and archived meet international requirements. It enables Singapore enterprises' research laboratories to gain acceptance for their environmental health and safety data in OECD countries. This reduces duplicative testing and thus shortens the time-to-market for their new products.

The programme also provides assurance to both local and overseas regulators of the reliability of the data from the registered research laboratories. This helps Singapore companies to gain greater access to international markets.

Singapore has been a member of the OECD Mutual Acceptance of Data (MAD) framework since January 2010. Studies conducted in Singapore under GLP compliant conditions is accepted in more than 30 OECD and non-OECD member countries.

The following are some of the GLP studies that a facility may seek registration with SAC:

- Physical – Chemical Testing
- Toxicity Studies
- Mutagenicity Studies
- Environmental Toxicity Studies
- Studies on Behaviour in Water, Soil, Air and Bioaccumulation
- Residual Studies
- Studies on Effects of Mesocosms and Natural Ecosystems
- Analytical and Clinical Chemistry Testing

ACCREDITATION SCHEME FOR PROFICIENCY TESTING PROVIDERS (PTP)

ABOUT PTP

Many testing and calibration laboratories operate independently from other laboratories and lack the opportunities to compare the validity and accuracy of their data and results with others. The need for continuing confidence in laboratory performance is not only essential for laboratories and their customers but also for other interested parties such as regulators, accreditation bodies and other organisations that specify requirements for laboratories. This can be achieved through Proficiency Testing, which involves the use of inter-laboratory comparisons for the determination of laboratory performance.

For proficiency testing providers to demonstrate their capabilities and deliver confidence to their customers, they need a third-party endorsement to show that they have met international standards. SAC launched its accreditation scheme for Proficiency Testing Providers (PTP) on 14 August 2013 to provide that recognition. With accreditation, local PT providers will be able to market their services within Singapore, in ASEAN and even internationally.

WHY BE ACCREDITED?

Being an accredited PTP gives the organisation credibility for their PT services. With the recognition of SAC accreditation for PTP under the Asia Pacific Laboratory Accreditation Cooperation (APLAC) mutual recognition arrangement (MRA), this credibility goes beyond the local market.

In addition, with the pool of accredited local PTPs available, customers such as accredited laboratories will find it easier to look for affordable and reliable sources for their PT participation and implement their quality assurance programmes.

ACCREDITATION CRITERIA

The primary standard used for accreditation is ISO/IEC 17043 (Conformity Assessment – General Requirements for Proficiency Testing), published in February 2010. This standard provides a basis for all the interested parties to determine the competence of organisations that provide proficiency testing.

The requirements in this standard apply to areas regarding management, planning and design, personnel, assuring quality, confidentiality, and other aspects, as appropriate to organizing PT programme.

A technical note, PTP 001 – Requirements for the Application of ISO/IEC 17043, is used in conjunction with the standard. It provides the policies and guidance for organisations in their application of ISO/IEC 17043: 2010.

This is a voluntary scheme that is open to all facilities. SAC accreditation is only granted for the specific scope(s) which the organization has applied for.

For more details, visit SAC website at www.sac-accreditation.gov.sg

ACCREDITATION PROCESS

INTRODUCTION

Upon receiving the application, the SAC will assign suitably qualified assessors to assess the applicant's compliance with the respective international standards. Below are the international standards which applicants need to comply with, depending on the nature of the conformity assessment activities.

- a) ISO/IEC 17021-1 – Requirements for Bodies Providing Audit and Certification of Management Systems
- b) ISO/TS 22003, Food Safety Management Systems – Requirements for Bodies Providing Audit and Certification of Food Safety Management systems
- c) ISO/IEC 17065 – Requirements for Bodies Certifying Products, Processes and Services
- d) ISO/IEC 17024 – General Requirements for Bodies Operating Certification of Persons
- e) ISO/IEC 17025 – General Requirements for the Competence of Testing and Calibration Laboratories
- f) ISO/IEC 17020 – General Criteria for the Operation of Various Types of Bodies Performing Inspection
- g) ISO/IEC 17043 – General Requirements for Proficiency Testing
- h) ISO 15189 – Medical Laboratories – Particular Requirements for Quality and Competence

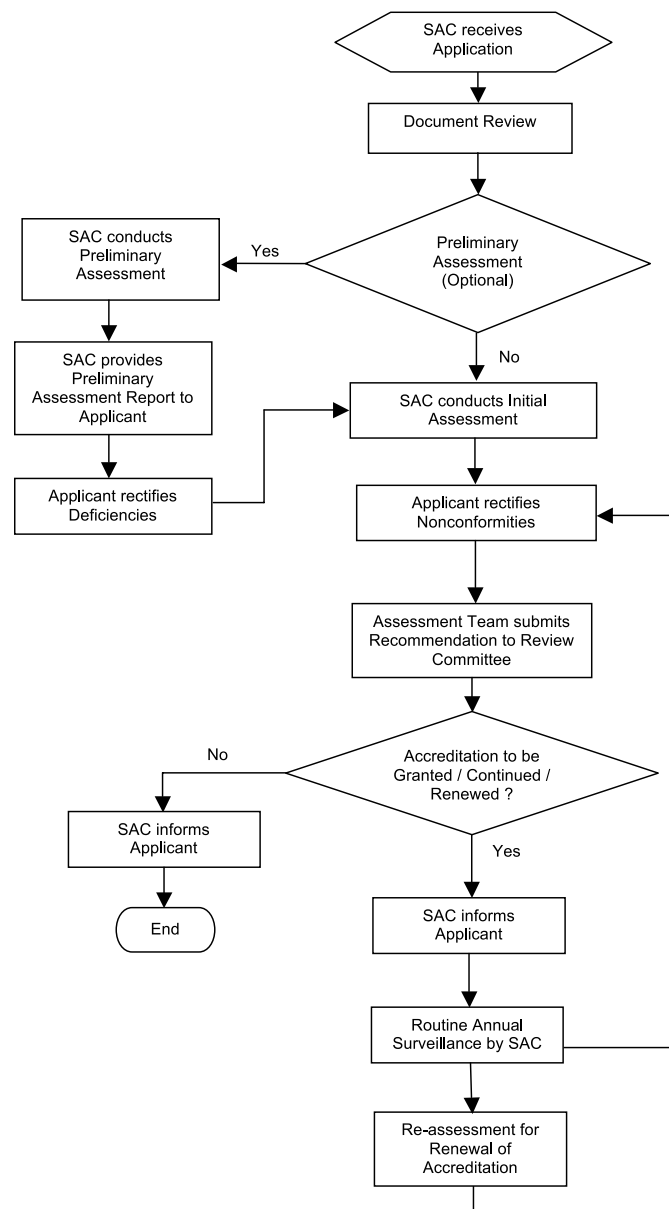

The assessment consists of document review, assessment at the conformity assessment body's office and on-site witnessing or demonstration of auditing/testing/inspection activities.

Accreditation is recommended after the applicant has met the accreditation requirements. A certificate of accreditation is then awarded by the SAC for specific scopes. The flow of the accreditation process is shown in Figure 1.

ROUTINE ANNUAL SURVEILLANCE AND RE-ASSESSMENT

Routine annual surveillance is conducted after the award of accreditation to ensure continual compliance with accreditation requirements. Accreditation is valid for 4 years and a full re-assessment is required for the renewal of accreditation.

Figure 1: Accreditation Process

SAC ACCREDITATION SUPPORT IN KEY INDUSTRY SECTORS

NURTURING A WORLD-CLASS BIOMEDICAL HUB

Over the past 15 years, Singapore has established itself as a world-class scientific and biomedical hub, thanks to an integrated research ecosystem that helps organisations access multidisciplinary capabilities in a single location. As a result, many of the world's leading biomedical sciences companies are using the city-state as their Asian base to drive innovation.

Comprising 50 manufacturing plants and 50 research and development centres, Singapore's biomedical sector houses more than 30 of the world's leading biomedical sciences companies, including GlaxoSmithKline, Novartis and Pfizer. In 2015, the manufacturing sector represented 21% of Singapore's GDP, with biomedical manufacturing accounting for a quarter of that figure. Since 2000, Singapore's medical technology industry, a subset of the biomedical sector, has tripled its manufacturing output – from S\$1.1 billion to S\$3.7 billion. It has also more than doubled its workforce – from 4,000 to 10,000.

As Asia's fastest-growing 'bio cluster', Singapore provides the ideal conditions for research institutes, corporate laboratories and public hospitals to accelerate drug discoveries and develop medicines and therapies that can be customised for regional and global markets.

SUPPORTING REGULATORY FRAMEWORKS

Singapore's success as a regional centre for innovation in biomedical services is largely due to its focus on ensuring the safety of biomedical products, services and procedures.

The Health Sciences Authority (HSA) and the Singapore Accreditation Council (SAC) have worked closely together to ensure credibility and quality of the biomedical industry to support regulatory framework.

The SAC, manages the accreditation schemes that ensure conformity assessment bodies (CABs) – laboratories, inspection bodies and certification bodies – are technically competent. It is also the national monitoring authority for good laboratory practice (GLP) and manages the GLP Compliance Programme, which ensures a facility's processes and practices for laboratory studies meet international requirements.

To date, SAC-accredited certification bodies have certified more than 400 medical device distributors to the Good Distribution Practice for Medical Devices Standard (GDPMDS), ensuring that medical devices are properly maintained and stored throughout the distribution process. The SAC has also accredited 12 laboratories that analyse pharmaceutical products, medical devices, traditional Chinese medicine and health supplements.

ENHANCING PROCESS EFFICIENCY

"Singapore has a number of measures in place to make biomedical products safe for consumers and professionals," says Mr Dave Cheng, Managing Director of Certification International, an international audit and certification body. "The Good Distribution Practice for Medical Devices (GDPMDS), for instance, ensures that the entire supply chain management system has been checked and certified by a SAC-accredited certification body."

"This not only enhances traceability and facilitates the process of field recalls if the need arises, it also makes companies more efficient and accountable," he adds.

MOVING TO GREENER PASTURES

Despite being a tiny, water-scarce nation, Singapore is well positioned to become an exemplary green economy.

In just a decade, the country has turned its environmental and water sectors into key growth industries. Through innovative policies and significant investments in research and development (R&D), it has improved its nationwide energy efficiencies and developed several commercial and industrial applications for clean energies.

Thanks to initiatives such as the Sustainable Singapore Blueprint 2015, Singapore's national vision to become a more liveable and sustainable economy is making great strides.

BUILDING A STRONG ECOSYSTEM

Since 2006, the government has committed S\$470 million to encourage innovation and develop capabilities in the water industry, which has grown its value-added contribution to GDP to S\$1.7 billion in 2015 (0.6% of GDP). These investments have attracted more than 180 local and international water companies, along with 26 water-technology research centres.

Singapore's clean energy sector is driven by a vibrant ecosystem of local companies that have developed a strong reputation for their expertise across the value chain. Whether it is environmental consultancy, waste management or pollution control, clean technologies constitute a key economic growth area that comprises close to 500 clean technology-related businesses.

LEADING BY EXAMPLE

The Singapore Accreditation Council (SAC) plays a key role in Singapore's environmental efforts. It ensures the competence of conformity assessment bodies (CABs) that provide testing, inspection and certification across the entire supply chain.

For example, it accredits laboratories for water testing, and certification bodies providing environmental management systems (ISO 14001), energy management systems (ISO 50001) and water efficiency management systems (SS 577) certification.

This has helped Singapore's positioning as a 'living laboratory' in which local and foreign companies can develop, test and commercialise innovative solutions, Singapore can introduce the best and latest technologies before other countries, and also act as a strategic springboard for companies serving the region.

The SAC also supports the programmes and initiatives launched by other government bodies.

In 2010, the US Environmental Protection Agency recognised the SAC under its ENERGY STAR programme, thus assuring consumers that Singapore products entering the US comply with environmental requirements. This ensures Singapore's environmental initiatives are more likely to reach the wider US market and contribute to its international reputation.

FOSTERING CONFIDENCE

Whether at home or abroad, a strong reputation can make or break a sector's chances of growth. Water, for instance, is a scarce resource in Singapore, which means it is especially important that it is well monitored by accredited bodies.

"Singapore's strong regulatory framework for water quality relies on accredited testing laboratories to conduct tests and assessments according to international standards and regulations," says Ms Yang Yixin, Principal Chemist at the PUB Water Quality Laboratory. "This not only gives great confidence in the quality of their processes, it also guarantees the impartiality of their results."

SAILING THE HIGH SEAS

Singapore's marine industry has experienced significant growth over the last 50 years, evolving from basic ship building and repairs to a world-class industry that holds 70% of the world's market share and represents 1.7% of the country's GDP.

Functioning as a globally renowned one-stop centre that includes rig building, offshore engineering, marine surveying services, salvaging distressed vessels and cargo, and anchorage amenities, Singapore's marine industry employed 106,600 workers and achieved a turnover of S\$17.23 billion in 2014.

TRANSFORMING THE BUNKERING INDUSTRY

Although Singapore does not produce any oil, it is the world's largest bunkering port and plays a key role as an international maritime centre. In 2015, about 45 million tonnes of bunker sales were registered in Singapore. Amidst the intense competition and domestic constraints of land and manpower, Singapore's bunkering industry competes not only on price and efficiency but also on being a trusted hub for quality, quantity and dispute resolutions.

In the early 1990s, there was no globally or nationally accepted procedure for bunker delivery operations and disputes on bunker quantity and quality were a common concern in the industry. Singapore became the first country in the world to develop and implement bunkering standards covering documentation, equipment, procedures, management of the bunker supply chain and ensuring accurate and fair transaction of bunker fuel purchased in Singapore waters.

Standards and accreditation played an important role in developing Singapore as a major world bunkering hub. Bunker survey companies are required to be accredited to ISO/IEC 17020 in order to be licensed by the Maritime and Port Authority of Singapore (MPA). This enhances industry confidence in the many bunker surveying companies in Singapore and further help protect the interest of the relevant bunker players in this multi-billion dollar business, and benefits the bunker and shipping community in the long term.

ENSURING WORKPLACE HEALTH AND SAFETY

Singapore's marine industry has steadily improved its safety record over the last decade. Fatality rates have dropped from 11.1 in 2009 to 4.2 in 2015. Shipyards have set out to increase safety awareness among workers and a number of initiatives have introduced comprehensive safety briefings, trainings and guidelines.

The Singapore Accreditation Council (SAC) has been working with the Workplace Safety and Health (WSH) Council since 2008 to ensure that conformity assessment bodies, together with supervisors and line managers, are technically competent in inspecting and certifying marine and offshore equipment, procedures and personnel. This ensures that safety practices and guidelines are known and respected at all levels of the sector.

The range of accreditation programmes available include accreditation of certification bodies in quality, environmental, and occupational safety and health management systems; accreditation of inspection bodies conducting inspection for lifting equipment and pressure vessels; accreditation of laboratories conducting non-destructive testing for weldments, joints and corrosion mapping, hardness testing and pressure testing, and accreditation of calibration laboratories for calibration of pressure gauges.

QUALITY AND STANDARDS REMAINS A PRIORITY

By leveraging on Singapore's robust standards and conformance infrastructure, the marine and offshore industry will be in a better position to navigate through today's challenging economic landscape. Taking the industry to new heights requires more than significant investments in the sector's knowledge and innovation capabilities. Companies must remain committed to delivering high quality products and services, and provide a safer working environment for their employees.

DEVELOPING ASIA'S LEADING FOOD AND NUTRITION HUB

The Food Manufacturing industry plays a vital role in Singapore's economy, supporting the country's reputation as one of Asia-Pacific's food capitals. More than half of its output is exported to countries such as Japan and China. In 2015, the industry contributed S\$3.7 billion to Singapore's GDP and employed about 40,000 workers.

In the Industry Transformation Map launched in November 2016, regional and global expansion was highlighted as an important growth strategy. With its diversity and cosmopolitan flavour, the industry offers tremendous opportunities for entrepreneurs because of its low entry barriers. Many home grown food companies have also expanded overseas by fostering partnerships with large global companies for joint distribution and product development.

SEIZING NEW OPPORTUNITIES

Asia's economic growth has created a burgeoning consumer market, and this new breed of affluent consumer is increasingly demanding more sophisticated products that cater to their specific needs and preferences. To capture a slice of this promising market, food manufacturers will need to create well-differentiated products that offer customers a clear value proposition.

This means investing heavily in research and development to create innovative products that are healthier, ethically sourced, more convenient or targeted to specific groups – such as halal or vegan offerings.

Singapore food companies have an advantage with the country's reputation as a strict but fair enforcer of laws, rules and regulations. Its uncompromising approach not only shapes its uniquely conducive business environment, it also ensures consumers know its food products are thoroughly tested and approved at every stage of production, transport and sale.

ACCREDITATION MAKES THE REPUTATION

Building on Singapore's global reputation for high standards in food quality and safety, more food manufacturers are using its internationally recognised certifications as a competitive advantage. The Food Safety Management System and the Hazard Analysis and Critical Control Points (HACCP) certifications, for instance, demonstrate to consumers that a company has proper processes in place for manufacturing its food products

and these have also been thoroughly inspected and tested by accredited laboratories for additives and contaminants such as bacteria, allergens and chemicals.

The Singapore Accreditation Council (SAC) supports the food industry through a competent and reliable pool of testing, inspection and certification bodies that ensure food products for local consumption or export are safe and of high quality. Guaranteeing food safety is critical for any company operating in the food and beverage sector, especially when large and complex supply chains are involved. Ensuring these supply chains are monitored by accredited bodies is the SAC's main focus in this sector.

The SAC also signed numerous mutual recognition arrangements (MRAs) to increase regional trade and market opportunities for local businesses. These arrangements facilitate signatory countries to recognise one another's accredited reports and certificates, saving food manufacturers time and money when they export their products to more than 80 countries.

The SAC also works with other regulators, such as the Islamic Religious Council of Singapore (Majlis Ugama Islam Singapura, MUIS), to ensure food and drinks adhere to Islamic dietary laws. This includes using SAC-accredited laboratories to test products suspected of containing unacceptable ingredients, such as alcohol or pork. SAC-accredited laboratories also support Singapore Customs by testing the alcohol content of beverages and liquors for classification and taxation purposes.

ENSURING SAFETY AND QUALITY

"Internationally recognised accreditations and approvals demonstrate our expertise and credibility," says Mr Kerry Russell, General Manager SEA and China at AsureQuality, an SAC-accredited laboratory. "For our customers, they are proof that the food products they take to market have been independently tested according to international laboratory standards. For end consumers, they guarantee the safety and quality of the food products they put on their table."

"Building and maintaining confidence in food safety and quality testing is no easy task," he adds. "But over the years Singapore has proven its commitment to accreditation and certification, allowing local inspection, certification and laboratory companies such as ours to access broader markets around the region."

ENABLING DIVERSIFICATION OF THE PETROCHEMICALS INDUSTRY

Despite its lack of oil and gas resources, Singapore is a leading oil and petrochemicals hub in Asia, one of the world's top three export refining centres and the world's top bunkering port.

Thanks to the success of Jurong Island – home to an industrial complex with integrated logistics and warehousing infrastructure – many of the world's leading energy and chemical companies have chosen Singapore as their regional base. These organisations include BASF, ExxonMobil, LANXESS, Mitsui Chemicals, Shell and Sumitomo Chemical.

Together, the petroleum, petrochemical and specialty chemical industries form a key pillar of Singapore's economy, representing 5% of its GDP and accounting for 34% of its total manufacturing output in 2014. In 2015, total investments in Jurong Island exceeded S\$35 billion, leading to a significant economic flow-on effect for the storage, logistics, and testing and certification sectors.

The support of the Singapore Accreditation Council (SAC) – combined with Singapore's geographical advantage, outstanding logistics services and reputable investment environment – safeguards the quality and safety of Singapore's petrochemical products and services.

STRENGTHENING SINGAPORE'S REPUTATION

Accreditation is an essential tool used by petrochemical companies to remain competitive both at home and abroad. This is especially true for local exporting SMEs, whose installations, equipment, products and materials must adhere to internationally recognised standards and practices, and be assessed against statutory, voluntary or customer-based requirements.

For example, manufacturing equipment such as pressure vessels and lifting gears are legally required to be tested and inspected

by accredited bodies. Untested pressure vessels have a higher chance of failing, increasing the risk of casualties and fatalities, productivity losses and repair costs. Companies can help avoid these risks by appointing accredited conformity assessment bodies to test, inspect and verify that their equipment is reliable and safe for use.

With its Accreditation Schemes, the SAC gives formal recognition to an organisation's competence, credibility and independence in carrying out its conformity assessment activities. Recognising the importance of the accreditation to provide assurance in bunkering, the Marine and Port Authority of Singapore (MPA) has made the SAC's accreditation scheme for cargo inspection mandatory for all bunkering operations in Singapore.

Companies in the petrochemical industry are also certified to SS 506 for Occupational Safety & Health Management System by SAC accredited certification bodies. The SS 506 Standard, for example, ensures that safe work processes and protocols are followed whenever hazardous materials are stored, processed and handled.

SUPPORTING INNOVATION IN THE INDUSTRY

Asia's demand for petrochemicals, advanced materials and specialty chemical products is growing rapidly, opening up a number of opportunities for companies that use Singapore's accreditation framework to safely and reliably explore innovative processes and products.

Singapore has a strong track record for intellectual property rights protection and a focus on providing businesses with high quality manpower, technology and infrastructure. This makes it an ideal environment for companies to develop and commercialise proprietary technologies and first-class manufacturing processes.

PILLARS OF THE CONSTRUCTION SECTOR

A safe and sustainable built environment improves Singaporeans' day-to-day lives and makes the country an attractive destination for foreign visitors and investors.

In 2015, the sector contributed 4.7% to GDP, representing at least S\$34 billion in construction contracts. About 65% of this was driven by major public sector developments, including water reclamation and sewerage projects, improvement work on two expressways, and the construction of Changi Airport's fourth and fifth terminals.

According to the Building and Construction Authority (BCA), construction demand between 2017 and 2018 is expected to be between S\$26 billion and S\$35 billion. Between 2019 and 2020, it is expected to be even higher, between S\$26 billion and S\$37 billion.

BUILDING A REPUTATION

Accreditation schemes developed by the Singapore Accreditation Council (SAC) contribute to the sector's ongoing success. These ensure standards are kept up to date and that certification, inspection and testing regimes are in place to meet the needs of the industry.

The SAC works with government bodies such as the BCA, Land Transport Authority (LTA) and Housing & Development Board (HDB) to develop accreditation schemes that engineers, builders and architects can depend on.

These accreditation schemes ensure building products such as structural steel, steel reinforcement and ready-mixed concrete are properly tested and certified. They also help ensure the site investigations essential to creating foundation designs are of high quality, the measuring equipment are accurate

and the lifting equipment are reliable. Testing, inspection and certification of these areas are carried out by laboratories, inspection bodies and certification bodies accredited by the SAC.

The SAC also supports the Singapore Green Building Council (SGBC) by expanding the current product certification scheme to include green building products for the Singapore Green Building Product (SGBP) labelling scheme – a programme aimed at making environmental performance an integral consideration in every stage of a building's life cycle, from feasibility to inauguration.

RAMPING UP WORK SAFETY

Together with standards and regulations, SAC-accredited conformity assessment services ensure that products and procedures are trustworthy, and the sector's safety and reliability are improved.

The SAC works closely with the Workplace Safety and Health (WSH) Council and the Ministry of Manpower (MOM) to improve workplace safety in the construction sector through various accreditation programmes such as Learning Service Provider Certification to ensure workers are properly trained.

LOOKING AHEAD

"The SAC plays an important role complementing MOM's regulatory efforts," says Er. Ho Siong Hin, Commissioner for Workplace Safety and Health, Ministry of Manpower (MOM), Singapore. "Apart from raising WSH standards in industries, the SAC helps raise the quality of WSH training and enhance oversight of training organisations."

"As more companies get accredited, the overall safety and health standard of the whole industry is raised," he adds.

FUTURE-PROOFING SINGAPORE'S WORKFORCE

As a nation with no natural resources, Singapore's biggest asset is its people. Using a range of training programmes – from courses and postgraduate studies to industrial attachment opportunities – the government aims to develop a highly skilled workforce that can take advantage of future economic opportunities.

According to the Ministry of Manpower (MOM), total workforce growth is set to remain moderate and redundancies are expected to continue to rise. To counter these trends, the government has made it a key priority to transform industries, create more quality jobs, and help displaced workers seize new job opportunities through various career and employment support programmes.

In 2015, the government introduced the SkillsFuture and the Adapt and Grow initiatives – two long-term strategies designed to drive the next phase of its manpower development and provide Singaporeans with opportunities to develop their full working potential. To support and complement these strategies, the Singapore Accreditation Council (SAC) launched a number of initiatives that provide assurance in terms of the quality of training and development programmes.

RAISING THE BAR

The SAC launched the Personnel Certification (PC) accreditation scheme in 2013 to enhance the credibility and capability of certified professionals in the local, regional and global job markets. Through the PC accreditation scheme, the SAC provides third-party assurance of the competency and impartiality of certification bodies in charge of providing certifications to persons – as specified by the ISO/IEC 17024 standard (requirements for bodies operating certifications of persons).

In 2014, the SAC launched the accreditation programme for Learning Service Provider (LSP) certification. It defines the basic requirements that Singapore's more than 2,000 learning service providers in non-formal education and training must follow to meet international standards.

"Standards – particularly those related to occupational health and safety – help address the many challenges that can impact productivity and well-being," says Mr Winston Yew, Deputy Director of the Industry Capability Building Department at the Workplace Safety and Health Council (WSHC).

"Through its work with the SAC, the WSHC aims to increase the number of accredited entities that put safety and health standards at the forefront of their business practices and models."

The SAC accredited certification requires that learning service providers comply with the ISO 29990 -Requirements for providers of learning services in non-formal education and training and MOM Technical Notes. This helps to align training providers' practices to an international standard for quality professional practice and performance in the design, development and delivery of education, training and development.

GETTING A HEAD START

The SAC works closely with institutes of higher learning to set quality standards for the education sector and help equip the pre-workforce population with the skills and knowledge it will need to face future workplace challenges.

As part of the SkillsFuture initiative, the SAC collaborated with Temasek Polytechnic to develop an integrated system of education and training that responds to constantly evolving needs. In 2013, this partnership was formalised to offer a Specialist Diploma in Laboratory Management and Instrumentation to allow diploma holders in scientific disciplines to upgrade and deepen their skills and knowledge in laboratory management and instrumental techniques, such as gas chromatography and mass spectrometry.

In 2014, the SAC forged a similar partnership with Singapore Polytechnic to develop a CET Diploma in Laboratory Management. Launched in 2016, the course focuses on the ISO/IEC17025 Requirements for the competence of testing and calibration laboratories, and aims to help young professionals gain a better understanding of the accreditation requirements across sectors.

For the SAC, training and development is not only about learning best practices. It is also about applying them in the field and contributing to the safety of workers and the success of businesses. The SAC also provides training courses such as internal audit, inspection body and laboratory management, for conformity assessment bodies to enhance their capability.

POWERING A SMART NATION

Singapore's electrical and electronics industry is a major driving force behind the city-state's plan to become the world's first knowledge-based and innovation-driven Smart Nation. In an increasingly hyper-connected and ultra-mobile environment, consumers, businesses and governments want to capture, store, analyse and share information as fast and as securely as possible.

With a production output of S\$84 billion in 2015 – nearly 30% of the manufacturing sector's total output – and a workforce of more than 80,000 people – or 19% of all manufacturing jobs – the electrical and electronics industry is the bedrock of Singapore's manufacturing sector. Between 2011 and 2015, the fixed asset investment (FAI) in electronics exceeded S\$20 billion, representing about a third of Singapore's total FAI.

With its strong emphasis on education, highly rated human capital and robust intellectual property regime, Singapore is a world-class electrical and electronics hub that constantly identifies and develops new growth areas.

Although largely dominated by multinational corporations, the sector also includes many small and medium enterprises that specialise in niche areas such as satellite communications, precision components and wireless technology.

BRACING FOR GROWTH

Singapore's accreditation system is designed to ensure the competency of conformity assessment bodies in the testing and certification of products, processes and services.

For electrical and electronic products, the SAC has accredited twenty-one laboratories and six product certification bodies to conduct compliance tests and certification. SAC accreditation allows these organisations to be listed as designated Conformity Assessment Bodies (CABs) or Recognised Testing Laboratories (RTLs) under SPRING's Consumer Protection (Safety Requirements) Registration Scheme (CPS Scheme) that ensures household electrical and electronic goods sold in Singapore meet safety standards.

Similarly, the ASEAN Electrical and Electronic Mutual Recognition Agreement (EE MRA) helps to facilitate exports of electronics to member countries as long as they have been tested by an accredited laboratory or certified by an accredited certification body. This helps to reduce trade barriers and also provide cost and time savings for compliance testing, helping businesses access regional and international markets.

"Singapore has a strong accreditation framework that allows industry players to venture abroad," says Mr Wong Chee Kian, Laboratory Manager at Singapore Electrical Testing Services (SETS), an accredited third-party testing laboratory for a range of electrical products. "Thanks to the coordinated efforts of government agencies, smaller companies have a fighting chance in this competitive industry."

Mr Robin Soon, Head of SETS, agrees. "Singapore offers a business environment like no other," he adds. "Its strict regard for regulatory frameworks, intellectual property and skilled human capital translates into an unparalleled ability to identify and harness the world's megatrends as they take shape."

BUILDING A SMART, CONNECTED NATION

Launched in 2014, Singapore's Smart Nation programme aims to improve the way people live, work, play and learn, thanks to advanced information and communication technology (ICT).

A key enabler for all business sectors, ICT enhances Singapore's competitiveness by improving productivity and transforming work processes. In 2015, the ICT industry represented 4.2% of Singapore's total GDP, and the sector's total revenue more than doubled from S\$82.8 billion in 2010 to S\$189.6 billion in 2015.

That same year, 172,800 ICT professionals were hired across all sectors, such as software development, data analytics, cybersecurity, and networks and infrastructure.

An early mover in ICT, Singapore must now make sure its institutions and population are able to tap into the new business opportunities of the digital age. In this context, it is important that regulations follow the pace of transformation.

SUPPORTING THE TRANSFORMATION

Singapore has all the right elements to become a strategic geographical node for revolutionary technologies and business models. It has put into place policy frameworks, schemes and programmes to encourage innovation, and is working together with industry to encourage and nurture these future transformations.

In this regard, the accreditation schemes for testing, inspection and certification activities established by the Singapore Accreditation Council (SAC) are essential support to Singapore's ICT transformation journey.

The testing and certification of telecommunications equipment is a priority for the Infocommunications Media Development Authority of Singapore (IMDA), as there are a number of electromagnetic compatibility, radiation safety and electrical safety requirements. The Laboratory and Product Certification Bodies Accreditation Schemes are designed to ensure that testing and certification activities have been carried out competently and impartially in accordance with international standards.

Regarding cybersecurity, the Multi-Tiered Cloud Computing Security (MTCS) Singapore Standard (SS 584) is the world's first cloud security standard that spans multiple tiers of security, helping cloud service providers (CSPs) secure their customers' critical and sensitive data while matching it to customer security needs. Certification of the CSPs to MTCS (SS 584) is carried out by SAC accredited certification bodies.

The accreditation programme for End-of-Life ICT Equipment Management System (EMIS) certification to SS 587 was launched by SAC in 2014. SS 587 provides specifications for businesses and industries using ICT equipment with a framework to manage equipment, such as computers and mobile devices, in a sustainable and environmentally responsible way when they reach the end of their lifecycle.

Organisations certified against SS 587 by SAC accredited certification bodies will provide greater assurance in enhancing the credibility of their corporate environmental policies, putting them at the forefront of good corporate citizenship and practices, in return increasing their competitive advantage.

DRIVING INNOVATION

The work of the SAC is still nascent in the ICT sector. But the more widely adopted its accreditation schemes become, the more competitive ICT businesses operating in Singapore will be on the regional and global stage.

"The work of the SAC has increased Singapore's standing as a credible and competitive ICT hub," says Mr Tao Yao Sing, Assistant Director, Standards, Enterprise Development, IMDA. "Initiatives such as the MTCS standard have allowed companies to trust and adopt cloud technologies. Singapore can become a global ICT leader if it extends its standards and accreditation framework to emerging technologies such as virtualisation, artificial intelligence and the Internet of Things to achieve our Smart Nation vision."

INTERNATIONAL MEMBERSHIPS & MRAs

CROSSING BORDERS WITH MUTUAL RECOGNITION ARRANGEMENTS

The Singapore Accreditation Council (SAC) contributes to ensuring that Singapore goods and services meet safety and quality standards. Beyond Singapore's borders, the SAC also helps companies gain access to overseas markets by signing Mutual Recognition Arrangements (MRAs) with foreign governments and international accreditation bodies.

Countries that are signatories of an MRA recognise that reports and certificates issued by an accredited conformity assessment body (CAB) in a signatory country are equivalent to those issued by their own accredited CABs. This means accepting the results of each other's accredited organisations, facilitating an international recognition that reduces barriers to trade.

GOING GLOBAL WITH MRAS

MRAs serve as a global passport for Singapore enterprises, giving their products and services international recognition by regulators and consumers alike.

By eliminating the need for re-testing, re-inspection and re-certification in the importing country, companies significantly reduce their export costs and gain immediate entry into markets, which translates into lower prices for consumers.

Other than conforming to the relevant international standards, an accreditation body which is signatory to an MRA, undergoes regular stringent, multi-national peer evaluation. This ensures that signatories adhere to international accepted standards, with consistent and harmonised accreditation practices for mutual confidence.

Using accredited services can add significantly to a company's credibility by showing that the conformity assessment activities – testing, inspection and certification – meet internationally recognised standards.

PUTTING SINGAPORE ON THE WORLD STAGE

To date, the SAC has signed accreditation MRAs with more than 80 partners around the world, covering more than 85% of Singapore's exports. The SAC has signed 13 MRAs with international organisations, including the:

- International Accreditation Forum (IAF) for quality management systems, food safety management system and product certification
- International Laboratory Accreditation Cooperation (ILAC) for testing, calibration and inspection
- Pacific Accreditation Cooperation (PAC), for quality management systems, food safety management systems and product certification
- Asia Pacific Laboratory Accreditation Cooperation (APLAC) for testing, calibration, inspection and proficiency testing.

The SAC has made great headway in partnering with counterparts in emerging Southeast Asian economies. For instance, since 2001, it has accredited nine organisations in Brunei. In 2015, the SAC was named a partner accreditation body for Myanmar – a relationship that will lead to internationally recognised accreditation services and reduce technical barriers to trade within ASEAN.

More recently, the SAC has taken a more active role in the activities of the regional and international accreditation cooperations. In June 2016, SAC Director was elected Chair of the PAC for a three-year term. This will ensure Singapore's interests are taken into consideration in international policies and decisions.

Together, these MRAs give local companies a competitive advantage overseas. If Singapore companies are certified by a SAC-accredited body, their products and services are likely to enjoy the global benefits that the MRAs bring.

FACILITATING BUSINESS

"Our mission is to promote safe living and working environments," says Mr Anthony Tan, ASEAN Vice President and Managing Director, UL International-Singapore, an international product certification body and testing laboratory that is accredited by the SAC.

"The MRAs signed by the SAC help our clients navigate through various mandatory regulatory requirements. Doing this with minimal retesting and streamlined approval processes is an advantage that not only facilitates trade and shortens time to market, it also protects the interests of consumers."

1	Audio, video and similar electronic apparatus	IEC 60065 : 2001 Amd 1 : 2005 Amd 2 : 2010 IEC 60065:2014 EN 60065 : 2002 Amd 1 : 2006 Amd 11 : 2008 Amd 2 : 2010 Amd 12 : 2011 MS IEC 60065 : 2003 MS IEC 60065 : 2007 TIS 1195-2536 : 1993 PNS IEC 60065 : 2007 IS 616 : 2010	Audio, video and similar electronic apparatus - Safety requirements
(B) HOME APPLIANCES (HOUS)			
1	Instantaneous water heater	IEC 60335-2-35 : 2002 Amd 1 : 2006 Amd 2 : 2009 IEC 60335-2-35 : 2012	Particular requirements for instantaneous water heaters
2	Electrical Circulating and Regulators	SS 360 : 1992 Amd 1 : 1992 Amd 2 : 1996 Amd 3 : 1998	Specification for performance and construction of electrical circulating and regulators
(C) PHOTOVOLTAIC (PV)			
1	Photovoltaic (PV) Module	IEC 61215 : 2005	Crystalline Silicon Terrestrial Photovoltaic (PV) modules - Design qualification and type approval
2	Photovoltaic (PV) Module	IEC 61646 : 2008	Thin-film Terrestrial Photovoltaic (PV) modules - Design qualification and type approval
3	Photovoltaic (PV) Module	IEC 61730-1 : 2004 Amd 1 : 2011 Amd 2 : 2013	Photovoltaic (PV) module safety qualification - Part 1: Requirements for construction
4	Photovoltaic (PV) Module	IEC 61730-2 : 2004 Amd 1 : 2011	Photovoltaic (PV) module safety qualification - Part 2: Requirements for testing
5	Photovoltaic (PV) Module	IEC 61345 : 1998	UV test for Photovoltaic (PV) modules
6	Photovoltaic (PV) Devices	IEC 60891 : 2009	Photovoltaic devices - Procedures for temperature and irradiance corrections to measured 1-5 characteristics
7	Photovoltaic (PV) Devices	IEC 60904-1 : 2006	Photovoltaic devices - Part 1: Measurement of Photovoltaic current-voltage characteristics
8	Photovoltaic (PV) Devices	IEC 60904-2 : 2007	Photovoltaic Devices - Part 2: Requirements For Reference Solar Devices
9	Photovoltaic (PV) Devices	IEC 60904-3 : 2008	Photovoltaic devices - Part 3: measurement principles for terrestrial Photovoltaic (PV) solar devices with reference spectral irradiance data
10	Photovoltaic (PV) Devices	IEC 60904-5 : 2011	Photovoltaic devices - Part 5: determination of the equivalent cell temperature (ECT) of Photovoltaic (PV) devices by the open-circuit voltage method
11	Photovoltaic (PV) Devices	IEC 60904-6 : 1994 Amd 1 : 1998	Photovoltaic devices - Requirements for reference solar modules

The accreditation covers the following scopes:

Ready mixed concrete certification scheme, an ISO Type 5 certification system consisting of

- type test of a sample representative of production, inspection of production control and quality management system, and
- routine inspection of production control, quality management system and samples of the product

Standard used for certification:

- SS EN 206-1: 2009 - Specification for Concrete, Part 1: Specification, performance, production and conformity,
- SS 544: Part 1: 2009: Concrete - Complementary Standard to SS EN 206-1,
- SS 544: Part 2: 2009: Concrete - Complementary Standard to SS EN 206-1, and
- SAC CT 06: 2014 - SAC Criteria for Ready- Mixed Concrete Producers

Product Certification Scheme - Fire Safety Product

- ISO/IEC Type 1b Certification scheme consisting of type test of a sample of the product representative of production and subsequent batch inspection
- ISO/IEC Type 5 Certification scheme consisting of type test of a sample of the product representative of production; initial audit of factory quality management system; and subsequent periodic surveillance of the factory quality management system and samples of the product.

Scopes of Accreditation

TÜV SÜD PSB PTE LTD

Electrical and Electronics

The accreditation covers the following scope:

ISO/IEC Type 1a

Certification scheme consisting of only type test of a sample of the product representative of production.

ISO/IEC Type 1b

Certification scheme consisting of type test of a sample of the product representative of production and subsequent batch inspection

ISO/IEC Type 5

Certification scheme consisting of type test of a sample of the product representative of production; initial audit of factory quality management system; and subsequent periodic surveillance of the factory quality management system and samples of the product.

Fire Safety Product

The accreditation covers the following scope:

ISO/IEC Type 1a: Certification scheme consisting of only type test of a sample of the product representative of production

ISO/IEC Type 1b: Certification scheme consisting of type test of a sample of the product representative of production and subsequent batch inspection

ISO/IEC Type 2: Certification scheme consisting of type test of a sample of the product representative of production and subsequent market surveillance

ISO/IEC Type 5: Certification scheme consisting of type test of a sample of the product representative of production; initial audit of factory quality management system; and subsequent periodic surveillance of the factory quality management system and samples of the product.

Part 22: Methods of determination of the fire resistance of non-loadbearing elements of construction Methods for fire tests on building materials, components and structures - Fire-resistance test of elements of construction Standard tests methods for fire tests of building construction and materials Fire-resistance tests - Elements of building construction Standard Method of Test of Fire Resistance of Building Construction Fire Precautions in the design, construction and use of buildings Partitions (including matching linings). Part 2: Specification for performance requirements for strength and robustness including methods of test Gypsum plasterboard - Part 1: Specification for plasterboard excluding materials submitted to secondary operations Products in fibre-reinforced cement - Non-combustible fibre-reinforced boards of calcium silicate or cement for insulation and fire protection Fire tests on Building Materials and Structures. Part 21: Methods for determination of the fire resistance of loadbearing elements of construction Methods for fire tests on building materials, components and structures - Fire-resistance test of elements of construction Fire-resistance tests - Elements of building construction	1a, 5
32	Fire rated ceiling - Compartmentation	BS 476 Pt 22: 1987 or AS 1530 Pt 4: 2005 or ASTM E119-95A or ISO 834: 2003 or NFPA 251: 2006	Fire Tests on Building Materials and Structures. Part 22: Methods of determination of the fire resistance of non-loadbearing elements of construction Methods for fire tests on building materials, components and structures - Fire-resistance test of elements of construction Standard tests methods for fire tests of building construction and materials Fire-resistance tests - Elements of building construction Standard Method of Test of Fire Resistance of Building Construction and Material	1a, 5
33	Fire rated ceiling - Protection to steel beams that support RC floor	BS 476 Pt 23: 1987 or AS 1530 Pt 4: 2005 or ISO 834: 2003	Fire Test on Building Materials and Structures. Part 23: Methods for determination of the contribution of components to the fire resistance of a structure Methods for fire tests on building materials, components and structures - Fire-resistance test of elements of construction Fire-resistance tests - Elements of building construction	1a, 5
34	Fire rated ceiling - Protection to timber/steel flooring	BS 476 Pt 21: 1987 or AS 1530 Pt 4: 2005 or ISO 834: 2003	Fire Tests on Building Materials and Structures. Part 21: methods of determination of the fire resistance of loadbearing elements of construction Methods for fire tests on building materials, components and structures - Fire-resistance test of elements of construction Fire-resistance tests - Elements of building construction	1a, 5
